

CONTINUOUSLY CONTROLLED WINDOW LIFTER, AS WELL AS FOLLOWER AND GUIDE PLATE FOR SAID CONTINUOUSLY CONTROLLED WINDOW LIFTER

Abstract of the Disclosure:

A continuous-path controlled window regulator includes a driver arranged on a guide plate in a motor vehicle and which can be displaced along a displacement trajectory formed by a guide way defined by the guide plate. The driver includes guiding elements arranged on the front and rear edges of the guide plate. At least one first guiding element arranged on the front edge of the guide plate and at least one second guiding element arranged on the rear edge of the guide plate are disposed in such a way that they are displaceably mounted with respect to each other. The first guiding element can be in a mounting position in order to be mounted on the guide way.
